

Your Precision Machine Shop Announces It Is Now ISO 9001:2015 Certified!

Meet T-N Machining, a precision manufacturing shop that opened for business 9 years ago. While the company is relatively young, its team brings many decades of experience in precision manufacturing to its customers. And, even better — the team is comprised of key team members who all worked together at other machine shops prior to the company starting up for business. Synergy and team relationships are a key differentiator for customers seeking out a superior precision machine shop.

T-N Machining offers turning; 3,4 and 5 axis milling of a variety of material, including stainless steel, titanium, hastalloy, aluminum, plastics, to name a few. You can feel confident in their abilities when your parts require high temperature alloys. You will find some of the best machine tools in the industry at the company — from HAAS Vertical

Machining Centers, to Doosan CNC lathes and Vertical Machining Centers, to Mori Seiki and Hitachi lathes, and their fully equipped inspection room includes a Tesa Dual 3-D CMM.

Business for T-N Machining grew from its inception. From starting out in a 1500 square foot facility, just 3 years ago the company expanded into its much larger facility, at 8000 square feet.

Amanda Weinberg, Operations and Supply Chain Manager, says, “Our owner, Truc Nguyen, is outstanding. He thinks outside of the box when helping our customers with new designs, and he even helps to modify prototypes for manufacturability, when this is something the customer requests. He is very involved in all aspects, even being a key machinist, and he treats his customers and his employees like family.” Amanda left her position at another precision machine shop to come work for Truc - she so believed in his ability to build a successful company.

T-N Machining’s customers span the aerospace, semiconductor, medical, energy, industrial and oil/gas industries. Amanda says, “Our company has been making very complex, precision parts for our customers since we opened for business. We knew that to continue to grow our business and to satisfy our customers, we would have to put processes in place - and that meant ISO 9001 certification.”

When Amanda and the team at T-N Machining made the decision to begin the process of ISO certification, Amanda says, “I didn’t interview prospective consultants. In my 12 years in manufacturing in Arizona, I knew that Bretta Kelly, owner of BMSC, was the company we needed to help us to achieve this goal.”

The T-N Machining team contracted with BMSC in October of last year. Amanda says, “When we met with Bretta, we talked about becoming AS9100C Compliant as well as with the new ISO 9001:2015 Standard being released that month if we could be her first company registered to the new standard!” Within 2 months, they were prepared for the certification, which happened in December. Amanda says, “We officially received our ISO 9001:2015 certification in January.” Bretta Kelly of BMSC says “T-N Machining was BMSC’s first ISO 9001:2015 certified company and first of a handful of companies to get registered to the new Standard! The team at T-N Machining did an amazing job not only implementing a compliant system to AS9100C / ISO 9001:2008 but preparing and registering to a brand new ISO 9001:2015 Standard, we were very impressed by their hard work and learning curve!”

Amanda says that the ISO certification process was indeed challenging, and given the fact that they achieved it in just a few months, it meant that she was fairly consumed with the process during this time. “Bretta and her colleague Debbie Hart were outstanding. They are so knowledgeable about the process, and our relationship with them made the experience very rewarding.”

Since certifying Amanda says that T-N Machining has immediately added 2 new customers to their portfolio. “These were customers who were interested in doing business with us, but required our ISO 9001 certification”, she added.

Truc says, “Quality is of utmost importance to our team. We have a wide range of gages, pins, micrometers, surface plates, and height masters to meet our customers’ needs. We offer our customers a very economical solution to their precision machining outsource requirements.”

To learn more about how T-N Machining, now ISO 9001:2015 certified and AS9100C Compliant, can help you with design and manufacturing of your complex parts, contact them at www.tnmachining.com or call Amanda at 602-278-8665.

If you are ready to grow your business with ISO and AS9100 certifications, contact Bretta Kelly, owner of BMSC. You can reach her at (602) 445-9400 or you can visit BusinessMSC.com. If you are ISO certified today, and need to meet the upcoming ISO9001: 2015 standards, BMSC can help you.
